DESCRIPTORS	*American Indians; *Census Figures; Demography; *Nonreservation American Indians; *Population Trends; *Reservations (Indian); Statistical Data; Tables (Data); Tribes
IDENTIFIERS	Census of Population

ABSTRACT

The in-depth statistical profile of the American Indian's condition today is the most comprehensive ever done on the subject by the Bureau of the Census (U.S. Department of Commerce, Social and Economic Statistics Administration). Presenting information from the 1970 Census of Population and Housing it includes tribal and reservation data and nonreservation data on Indians in the U.S. Some information for 1970 is: (1) 95% of Indian children 7-13 years old and over 1/2 of all Indians between 3 and 34 were attending school; (2) the median age of all Indians was 20.4 years while the national median was 28.1 years; (3) a total of 727,730 Indians were counted compared with 523,591 a decade earlier (information on race in the Census report was obtained principally through the use of self-identification); (4) nearly 1/2 the Indian population lived in urban areas and 28% lived on 115 reservations; and (5) nearly 40% of the Indian population lived below the low-income level in 1969, where as the proportion for the total U.S. population was 13.7%. The statistics in this report are based on a 20% sample of the population; data on place of birth, school enrollment, residence in 1965, selected housing equipment, and number of automobiles available are based on a 15% sample. POPULATION DIVISION

Meyer Zitter, Chief

ACKNOWLEDGMENTS—Many persons participated in the various activities of the 1970 census. Primary direction of the program was performed by **Conrad Taeuber**, former Associate Director for Demographic Fields, assisted by **David L. Kaplan**, 1970 Census Coordinator, and in conjunction with **Paul R. Squires**, Associate Director for Data Collection and Processing, and **Joseph Waksberg**, Associate Director for Statistical Standards and Methodology.

This report was planned and its content developed in the Population Division by **Patricia A. Berman**, of the Ethnic and Racial Statistics Staff, under the direction of **Paul C. Glick**, Senior Demographer, and **Tobia Bressler**, Special Assistant on Ethnicity. Professional contributions to the content of the report were made by **Gaile R. Maller** and **Nampeo R. McKenney. Elizabeth A. Larmon** and **Karen M. Mills** assisted in the preparation of textual materials. The work was under the general supervision of **Meyer Zitter**, Division Chief, and **Herman P. Miller** (Chief to 1972). Important contributions to the determination of the content of the PC(2) series of reports were made by a number of advisory groups and individuals representing or affiliated with universities, research organizations, professional associations, government agencies, and other groups.

The procedures for sample selection, sample weighting, and computation of sampling variances were developed in the Statistical Methods Division, under the supervision of **Morton Boisen**, Chief, and **Robert H. Hanson**, Assistant Division Chief, assisted by **William T. Alsbrooks, Peter A. Bounpane, Barbara A. Boyes**, and **Carlton W. Pruden.**

Geographic plans and procedures were developed in the Geography Division under the supervision of **William T. Fay**, then Chief, and **Robert C. Klove** and **Gerald J. Post**, Assistant Division Chiefs.

Data collection activities were administered by the Field Division, **Richard C. Burt**, Chief, and **Dean H. Weber**, Assistant Division Chief, with the assistance of the directors of the Bureau's data collection centers.

Systems and processing procedures were developed under the direction of **Morris Gorinson**, Assistant Chief, Demographic Census Staff. **Florence Wright**, assisted by **John F. Powell** and **Orville M. Slye**, was responsible for the clerical procedures and **Roger O. Lepage**, assisted by **Margaret P. Brooks, Stephen E. Goldman, Carol T. Schlechten**, and **Richard R. Warren**, was responsible for the computer programming. **Donald R. Dalzell** was responsible for the computer procedures and programs used for the electronic preparation of tables in this report.

The manual processing and microfilming of the questionnaires and the review of tabulation controls were performed in the Data Preparation Division (formerly Jeffersonville Census Operations Division), under the direction of **Robert L. Hagan**, then Chief, with the assistance of **Rex L. Pullin**. The manual coding operations were supervised by **John C. Campbell**, assisted by **Herbert J. Hough, Joe D. Kolb**, and **Leo C. Schilling. William L. Pangburn** supervised the microfilming operation. **Dan N. Harding**, assisted by **Nora H. Shouse**, was responsible for the tabulation review work.

FOSDIC and computer processing were performed in the Computer Services Division under the supervision of **James R. Pepal**, Chief, and **E. Richard Bourdon, C. Thomas DiNenna**, and **James W. Shores**, Assistant Division Chiefs. Development of the FOSDIC equipment was directed by **William M. Gaines**, Assistant Division Chief, and **McRae Anderson**. Development of the automatic microfilming equipment was directed by **Anthony A. Berlinsky.**

Publications planning, editing, composition, and printing procurement were performed in the Publications Services Division, under the direction of **Raymond J. Koski**, Acting Chief, by **Milton S. Andersen, Gerald A. Mann**, and **Wayne H. Massey.**

Important contributions were made by **Robert B. Voight** and **Sherry L. Courtland** in the planning and coordination of the 1970 census program; by **Lucille D. Catterton** in the planning of the tabular materials; and by **John W.H. Spencer, Sol Dolleck**, and **M. Douglas Fahey** in the systems design and operations for processing the census data.

LIST OF PC(2) SUBJECT REPORTS (POPULATION VOLUME II)

(Report numbers listed below omit the prefix PC(2)- which appears as part of the designation for each report)

ETHNIC GROUPS

* 1A. National Origin and Language
1B. Negro Population
* 1C. Persons of Spanish Origin
* 1D. Persons of Spanish Surname
* 1E. Puerto Ricans in the United States
1F. American Indians
* 1G. Japanese, Chinese, and Filipinos in the United States

MIGRATION

2A. State of Birth
2B. Mobility for States and the Nation
2C. Mobility for Metropolitan Areas
2D. Lifetime and Recent Migration
2E. Migration Between State Economic Areas

FERTILITY

* 3A. Women by Number of Children Ever Born

MARRIAGE AND LIVING ARRANGEMENTS

4A. Family Composition
4B. Persons by Family Characteristics
4C. Marital Status
4D. Age at First Marriage
* 4E. Persons in Institutions and Other Group Quarters

EDUCATION

5A. School Enrollment
5B. Educational Attainment
5C. Vocational Training

EMPLOYMENT

6A. Employment Status and Work Experience
* 6B. Persons Not Employed
6C. Persons With Work Disability
* 6D. Journey to Work
* 6E. Veterans

OCCUPATION AND INDUSTRY

* 7A. Occupational Characteristics
* 7B. Industrial Characteristics
7C. Occupation by Industry
* 7D. Government Workers
* 7E. Occupation and Residence in 1965
* 7F. Occupations of Persons With High Earnings

INCOME

8A. Sources and Structure of Family Income
8B. Earnings by Occupation and Education
8C. Income of the Farm-Related Population

LOW INCOME

* 9A. Low-Income Population
* 9B. Low-Income Areas in Large Cities

AREAS

* 10A. Americans Living Abroad
10B. State Economic Areas

AMERICAN INDIANS MAKE GAINS IN EDUCATION; LAG
IN MOST SOCIAL, ECONOMIC AREAS, CENSUS REPORT SHOWS

American Indians are making impressive advances in education but lag behind the rest of the Nation in most social and economic measures, a major study released today by the Bureau of the Census shows.

The in-depth statistical profile of the American Indian's condition today is the most comprehensive ever done on the subject by the Bureau, part of the U.S. Department of Commerce's Social and Economic Statistics Administration. It presents information from the 1970 Census of Population and Housing and includes tribal and reservation data as well as data on Indians in metropolitan, urban, and rural areas.

The report shows that 95 percent of Indian children 7 to 13 years old and over half of all Indians between 3 and 34 were attending school in 1970. The number attending college doubled between 1960 and 1970.

The Indian population grew by 51 percent in the 1960-'70 decade--far above the national rate of 13 percent--and is nearly eight years younger than the population as a whole. The median age of all American Indians in 1970 was 20.4 years; the national median was 28.1 years.

(Information on race in the 1970 census was obtained principally through the use of self-identification. Persons who reported that they were American Indian were asked to name their tribe. These race and tribe entries were accepted by the Bureau.)

A total of 792,730 Indians were counted on Census Day 1970, compared with 523,591 a decade earlier. In 1970, nearly half the Indian population lived in urban areas. Another 213,770, or 28 percent, lived on the 115 reservations identified by the Census Bureau, and the remainder resided on smaller reservation and in rural areas.

(over)

More than half the Indian population lived in just five States in 1970--Arizona, California, New Mexico, North Carolina and Oklahoma. About 85 percent lived in 18 States.

The median income of Indian families was $5,832 in 1969; for the population as a whole it was $9,590. Thus, for every $100 all American families received, Indian families got about $61.

There was a wide range of income earned by Indian families in 1969, the report says. In 30 metropolitan areas with an Indian population of at least 2,500, median annual family income was as low as $3,389 in Tucson, Ariz., and higher than $10,000 in Detroit and Washington, D.C. Generally, median family income was lower on reservations. It ranged from a high of $6,115 on the Laguna Reservation in New Mexico to $2,500 on the Papago Reservation in Arizona.

Nearly 40 percent of the Indian population was living below the low-income level in 1969, whereas the proportion for the total U.S. population was 13.7 percent.

About 55 percent of all employed Indians 16 years old and over work in urban areas, with about 70 percent of all males working in four broad occupational groups--craftsmen and foremen, operatives, laborers (except farm), and service workers. Nine percent were in the professional and technical ranks, about double the proportion in 1960.

In 1970, a third of all Indians 25 years old and over had completed high school; the proportion was considerably less than one-fifth in 1960. Median years of schooling was 9.8 for Indians (25 years old and over) in 1970, the same as for blacks. The national median was 12.1 years, and 52.3 percent of the total population had completed high school.

Indians living in Washington, D.C. ranked above the national average in both median number of school years completed and in the proportion of high school graduates. Median school years completed (for those 25 years old and over) was 12.6, and 66 percent were high school graduates in 1970. In sharp contrast, the median number of school years completed on the Navajo Reservation--the largest one--was 4.1, and only about 17 percent of persons 25 years old and over on the reservation had finished high school.

The report shows that Indian families tend to be slightly larger than those of the population as a whole, and nearly one-fifth of them were headed by a female in 1970. Nearly half lived in homes they either owned or were buying on Census Day 1970. This compares with a 63 percent proportion for the total population.

Copies of the report, "American Indians," PC(2)-1F, is available for $2.60 each from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, or from Commerce Department District Offices in major U.S. cities.

GENERAL

This report presents statistics on the American Indian population, cross-classified by various social and economic characteristics for the United States, regions, selected States, standard metropolitan statistical areas, Indian tribes, and identified reservations. Selected housing characteristics also are given. The data are based on the 1970 Census of Population. Legal provision for this census, which was conducted as of April 1, 1970, was made in the Act of Congress of August 31, 1954 (amended August 1957), which codified Title 13 United States Code.

A major portion of the information compiled from the 1970 Census of Population appears in Volume I, **Characteristics of the Population**, which focuses on the presentation of data for States, counties, places, and other areas of the United States. The present report is part of Volume II, **Subject Reports**, wherein most reports concentrate on the presentation of national and regional data for a particular subject. A list of Volume II subject reports from the 1970 census is presented on page II. For a description of Volumes I and II, as well as other elements of the data dissemination program of the 1970 Population and Housing Census, see Appendix E, "Publication and Computer Summary Tape Program."

The content and procedures of the 1970 census were determined after evaluation of the results of the 1960 census, consultation with a wide variety of users of census data, and extensive field pretesting. A number of changes were introduced in 1970 to improve the usefulness of the census results. For the characteristics shown in this report, the changes do not, however, affect to any appreciable extent the comparability of the 1970 data with those for 1960.

More detailed information on the technical and procedural matters covered in the text of this report can be obtained by writing to the Director, Bureau of the Census, Washington, D.C. 20233. Such information will also appear in later reports of the 1970 census.

Organization of the text.—The text consists of this introduction and Appendixes A through E, which appear after the tables. The introduction contains information relating specifically to the principal subject of this report, including definitions of terms and a discussion of editing procedures. Appendix A provides general information concerning the presentation of data in this series of reports and the collection and processing procedures of the 1970 census. Appendix B describes the various area classifications (e.g., urban and rural residence, urbanized areas, etc.) and also explains the residence rules used in counting the population. Appendix C provides brief definitions and explanations of subjects covered in cross-classifications in this report and other reports in this series. Appendix D presents information on sources of error in the data, sampling variability, ratio estimation, and editing procedures. Appendix E summarizes the data dissemination program.

Content of the tables.—Table 1 presents data for the American Indian population classified by sex and urban-rural residence for the United States, regions, divisions, and States. Tables 2 through 10 contain data on characteristics such as age, family composition, marital status, school enrollment, employment status, occupation, income in 1969, and housing for the United States, regions, and selected States by urban-rural residence. In tables 11 through 15, statistics on social, economic, and housing characteristics are given for selected standard metropolitan statistical areas, Indian tribes, and identified reservations. Tables 16 and 17 show the age and sex distributions for all the reservations and tribes identified in the 1970 census. Table 18 presents a cross-classification of mother tongue by age and sex for all Indians and for those living on identified reservations.

Sample size.—The statistics in this report are based on a sample adjusted to represent the total population. Most data are based on a 20-percent sample of the population; data on place of birth, school enrollment, residence in 1965, selected housing equipment, and number of automobiles available are based on a 15-percent sample. (See "Data Collection Procedures" in Appendix A.) An explanation of the ratio estimation procedure and information

on the sampling variability associated with the data are contained in Appendix D.

RELATED MATERIALS

1970 census reports.—Statistics on the American Indian population are published in chapters B and D of 1970 Census of Population, Volume I, **Characteristics of the Population**. Population totals and sex distributions, based on complete-count data, are presented in chapter B for the United States, its regions, divisions, and States, standard metropolitan statistical areas (SMSA's), urbanized areas, places, and counties. Age, sex, and nativity statistics for States, based on the 15-percent sample, are shown in chapter D. Chapters B and D were originally published as paperbound reports in Series PC(1)-B, **General Population Characteristics**, and Series PC(1)-D, **Detailed Characteristics**, respectively.

Statistics on the American Indian population are found in other Volume II subject reports of the 1970 Census of Population, namely, PC(2)-3A, **Women by Number of Children Ever Born**; PC(2)-4C, **Marital Status**; PC(2)-5A, **School Enrollment**; PC(2)-5B, **Educational Attainment**; PC(2)-7A, **Occupational Characteristics**; PC(2)-9A, **Low-Income Population**; and PC(2)-9B, **Low-Income Areas in Large Cities**.

Data similar to those published in this report are also being published for other racial and ethnic groups in the following Volume II subject reports: PC(2)-1B, **Negro Population**; PC(2)-1C, **Persons of Spanish Origin**; PC(2)-1D, **Persons of Spanish Surname**; PC(2)-1E, **Puerto Ricans in the United States**; and PC(2)-1G, **Japanese, Chinese, and Filipinos in the United States**. Statistics on the Korean and Hawaiian population will be included in the PC(2)-1G report; data on Aleuts and Eskimos in Alaska will be presented in a 1970 Census of Population Supplementary Report, Series PC(S1). Also, statistics will be presented in another PC(S1) report on the race of children of family heads cross-classified simultaneously by the race of the head and race of the wife, if any.

Reports from earlier censuses.—Information for 1960 on racial composition of the United States, regions, divisions, States, SMSA's, urbanized areas, cities, and counties were published in 1960 Census of Population, Volume I, **Characteristics of the Population**. Statistics on the social and economic characteristics of the American Indian population, based on a 25-percent sample, are presented in the 1960 Census of Population, Volume II, PC(2)-1C, **Nonwhite Population by Race**.

In the 1950 census, data on American Indians for States were published in Volume II, **Characteristics of the Population**. Data on social and economic characteristics of American Indians are presented in 1950 Census of Population, Volume IV, Part 3B, **Nonwhite Population by Race**, and in Volume IV, Part 5B, **Education**.

Unpublished data.—For most of the Volume II reports, statistics in addition to those published in the report are available on a reimbursable basis from computer tape files. Data shown for the United States as a whole are available for regions, divisions, and States, and, in a number of instances, the data for some characteristics were tabulated in greater detail than shown in the reports. Requests for unpublished data, giving a specific description of the figures desired, should be made in writing to the Director, Bureau of the Census, Washington, D. C. 20233. Inquiries concerning unpublished data should be transmitted to the Bureau as soon as possible since tape files are not maintained indefinitely.

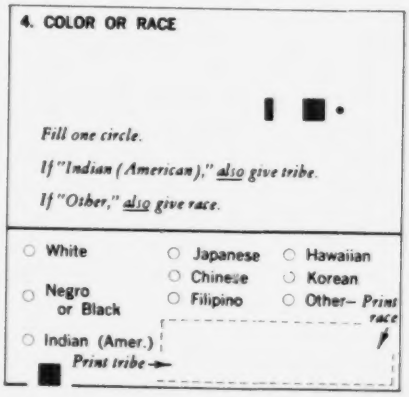
DEFINITIONS AND EXPLANATIONS OF PRINCIPAL SUBJECTS

The definitions and explanations below relate only to the principal subjects of this report. Brief definitions of other items that appear in cross-classifications in the tables of this report are presented in Appendix C.

Race

The data on the American Indian population were derived from question 4, on color or race, which was asked of all persons (see facsimile of questionnaire item below). In Alaska, "Aleut" and "Eskimo" were substituted for the categories "Korean" and "Hawaiian."

The concept of race as used by the Bureau of the Census does not denote any scientific definition of biological stock. Rather, it reflects self-identifi-



cation by respondents. Since the 1970 census obtained information on race primarily through self-enumeration, the data represent essentially self-classification by people according to the race with which they identify themselves. For persons of mixed parentage who were in doubt as to their classification, the race of the person's father was to be used. The population of the United States is classified by race into several categories listed in question 4. The "Other" category includes Malayan, Polynesian, Thai, etc.

American Indian

The category "American Indian" includes persons who indicated their race as "Indian (Amer.)," as well as persons who did not classify themselves in one of the specific race categories on the questionnaire but who reported the name of an Indian tribe or had such entries as "Mexican American-Indian," "Canadian-Indian," or "South American-Indian."

Tribal designation.—Persons who reported themselves as American Indian on the 1970 census questionnaire were asked to name their tribe. Tribal entries were coded according to a detailed list of tribes during the general coding operations of the 1970 census. The tribal code list was prepared by the Bureau of the Census, prior to the 1970 census, and reviewed for accuracy and completeness by the Bureau of Indian Affairs of the Department of the Interior and the Indian Health Service of the Department of Health, Education, and Welfare. Tribal classifications were based upon historic data, geographic location, and linguistic stock. The complete listing of all tribes identified in the 1970 census is shown in the list at the end of this introduction.

Table 16 presents data by age and sex and whether living on reservations for all tribes identified in the census. Social and economic characteristics are shown in tables 11 through 15 for those tribes with at least 3,800 members, as reported in the 1970 census.

The 1970 census data on tribes may not be consistent with data from other sources such as the Bureau of Indian Affairs or the Indian Health Service. One of the major reasons for differences is that census data are based on self-identification, whereas statistics from other sources may be based on tribal enrollment. Persons whose names appear on tribal rolls may classify themselves as of some race other than Indian in the census, such as white or Negro. An additional major reason is that in the census, about 20 percent of the Indian population did not report any tribal affiliation.

The 1970 census statistics on tribes are not directly comparable to those collected in the 1910 and 1930 censuses because of differences in methods of enumeration and classification procedures.

Indian reservations.—In this report, data on reservations include only the 115 reservations identified for the 1970 census by the Bureau of the Census in conjunction with the Bureau of Indian Affairs. Maps showing the reservation boundaries were provided by the Bureau of Indian Affairs. Census enumeration districts, identified by the Bureau of the Census, were used as basic units for tabulating data for reservations. Table 17 presents the complete listing of the 115 reservations identified in the 1970 census. These reservations comprise about half of all reservations in the United States. Generally, reservations with smaller populations, including the Alaskan Native Villages, were not identified for the 1970 census by the Bureau. Thus, the 1970 census data for Indians living on identified reservations do not represent all Indians living on reservations. Social and economic data for identified reservations with 2,300 Indians or more, according to the results of the census, are shown in tables 11 through 15.

Data for Indians living on specific reservations may not be consistent with those from other sources, such as the Bureau of Indian Affairs, because the census count of Indians on reservations includes only Indians living within reservation boundaries as of April 1, 1970. Some American Indians live only a part of the year on reservations; those persons living outside reservations on April 1, 1970, were counted at their other place of residence. Indians living in communities adjacent to reservations or on trust lands outside reservations were excluded from the census count of the reservation population.

Special Edit and Allocation Procedures for Race

On the 1970 census questionnaire, respondents had the opportunity of indicating their racial identification by marking one of the eight circles indicating specific racial groups or by marking the "Other" circle and writing in their race. A considerable proportion of the respondents who marked the "Other" circle supplied specific write-in entries such as Mexican, Puerto Rican, Jamaican, etc. In the sample questionnaires, entries of this type were edited into the specific racial categories. The statistics presented in this report reflect the effects of this editing.

In the processing of the complete-count data, the editing procedure described above was performed only for those enumeration districts in which the proportion of "Other" marks exceeded certain tolerances. Because of this partial editing of the complete-count data on race and the universal editing of the sample data on race, there was a substantial overstatement of the residual "Other races" category in the PC(1)-B publications. A comparison of the complete-count and the sample distributions of the population by race is presented in table I. The differences indicate that the additional corrective editing shifted a substantial number of persons from the residual "All other" to the "White" category. The differences also reflect the effects of sampling variability.

If the race entry was missing on the questionnaire for a member of a household, an answer was assigned in the computer according to the race of other household members using specific rules of precedence of relationship. If race was not entered for anyone in the household, the race of the head of the preceding household was assigned. This procedure is a variation of the general allocation process described in Appendix D, "Accuracy of the Data."

Comparability With Other Data

1970 census complete count.—Table I shows that the number of American Indians as estimated from a sample is less than the complete count. The 20-percent sample figure for the United States is less than the complete count by 3.7 percent. For other geographic areas, differences can be greater or less. For a geographic area where the difference between the complete count and sample estimate of American Indians is substantial, the sample data can be improved by an adjustment performed as follows: Compute the ratio of the complete count to the sample count of American Indians for the geographic area. Apply this ratio to the sample data. Derived numbers based on the sample such as percents, means, or medians should not be adjusted in this way. Complete counts for American Indians are found in chapter B, Volume I, **Characteristics of the Population.**

Earlier censuses.—American Indians were first enumerated as a separate group in the 1860 census. However, Indians in Indian territory or on reservations were not included in the official population count of the United States until 1890. Special enumeration of Indians to obtain information on tribes and ancestry was conducted as part of the 1910, 1930, and 1950 censuses.

The count of Indians, 1900 to 1970, is shown in table II. The unusual fluctuations in the count between censuses are largely a result of differing procedures used from census to census for classifying persons as indians. In 1960 and 1970, information was obtained primarily through self-enumera-

TABLE I. **Comparison of Complete-Count and 20- and 15-Percent Sample Data on the Population by Race, for the United States: 1970**

(Minus sign (-) denotes decrease)

Race	Complete count	20-percent sample			15-percent sample

Source: Volume I, **Characteristics of the Population,** "United States Summary," and Volume II, **Subject Reports.**

tion. Respondents had the opportunity to classify themselves with respect to race, but nonrespondents were interviewed by telephone or direct visit. Prior to 1960, classification was made on the basis of observation by enumerators who may not have identified Indians living off reservations.

In 1970, persons of mixed Indian and white or Negro descent were asked to report the race with which they identify themselves. For persons who were in doubt as to their classification, the race of the father was to be used. In the 1960 census, persons of mixed white and Indian ancestry were included in the Indian category if they were enrolled on an Indian tribal or agency roll or if they were regarded as Indians in their community. A common requirement for such enrollment was that the proportion of Indian ancestry should be at least one-fourth. In 1960, persons of mixed American Indian and Negro descent were included as Indians only if the Indian ancestry predominated or if they were regarded as Indians in the community; mixtures of Indian and races other than white or Negro were classified according to the race of the father.

In 1950, persons of mixed Indian and white or Negro ancestry were included in the category "All other races." An attempt was made to identify and isolate these population groups in 1950, especially those in the eastern part of the United States. Generally, the number of such persons was small, except in North Carolina, which had a heavy concentration of this mixed racial population (notably in Robeson and surrounding counties). The large percentage increase (46.5) of Indians for the decade 1950-60 reflects, in part, this change in classification. If the 1950 figure for the Indian population is adjusted to include the North Carolina mixed racial group, the 1950-60 increase is reduced to 36.1. Accordingly, the 1940-50 increase is raised from 3.5 to 11.4 percent.

In censuses prior to 1950, persons of mixed Indian and Negro or white descent were variously classified, sometimes as Indian and sometimes as Negro. In the censuses of 1910 and 1930, a special effort was made to include all persons of mixed Indian and white descent as Indian. The results of each of these two censuses show a substantial increase in the Indian population over the preceding censuses.

TABLE II. **American Indian Population of the United States: 1900 to 1970**

(Changes in the growth of the American Indian population resulted in part from differences in procedures for classifying persons of mixed racial descent. Minus sign (—) denotes decrease)

Census year	American Indian population	Change from preceding census	
		Number	Percent
1970	792,730	269,139	51.4
1960	523,591	166,092	46.5
1950	357,499	12,247	3.5
1940	345,252	1,900	0.6
1930	343,352	98,915	40.5
1920	244,437	−32,490	−11.7
1910	276,927	39,731	16.8
1900	237,196	...	...

Limitations of the Data

The tribal classification list used to code write-in tribal entries on question 4 is subject to certain limitations. Historical information from the 1910 and 1930 censuses, geographic location, and linguistic stock were used to develop the basic classifications. Also, source materials were referenced, and resource persons outside the Bureau were consulted. It must be recognized that experts in the field have differing opinions concerning the classification of some tribes; current information on all tribes in the United States is unavailable in source materials. As a result, the 1970 detailed census code list may include a few tribes which existed historically but are extinct today. Undoubtedly, some tribes, especially those located in California and the northwestern section of the country, would have been classified differently by experts in the field. The Bureau plans further research to evaluate the 1970 census tribal code list.

Appendix A.—GENERAL INFORMATION CONCERNING THE DATA

PRESENTATION OF THE DATA .. App-1
Derived figures (percents, medians, etc.) App-1
Symbols App-1
Boundaries App-1

DATA COLLECTION PROCEDURES App-1

PROCESSING PROCEDURES App-2

PRESENTATION OF THE DATA

Derived figures (percents, medians, etc.).—Percents, medians, and means, as well as certain rates and ratios are shown in Volume II reports. For all types of derived figures in this series of reports, the figure is not presented (but indicated by three dots "...") if the base is smaller than the minimum number prescribed for the sample on which the figure is based. The minimum bases for 1970 are 100 (persons, families, or households) for the 20-percent sample, 132 for the 15-percent, and 400 for the 5-percent.

The reader should exercise caution in the use and interpretation of data for very small subgroups of the population; these data are especially subject to the effects of sampling variability, misreporting, and processing errors.

Percents that round to less that 0.1 are not shown but indicated as zero (i.e., "–"). The median, which is a type of average, is the middle value in a distribution; i.e., the median divides the distribution into two equal parts—one-half of the cases fall below the median and one-half of the cases exceed the median. When the median falls in the lower terminal category of an open-end distribution, the method of presentation is to show the initial value of the next category followed by a minus sign; thus, for example, if the median falls in the category "Less than $250," it is shown as "$250–." When the median falls in the upper terminal category of an open-end distribution, the method of presentation is to show the initial value of the terminal category followed by a plus sign; thus, for example, if the median falls in the category "$10,000 and over," it is shown as "$10,000+." The mean is the arithmetic average derived by adding the values in a particular distribution and dividing by the number of units in the distribution.

Symbols.—A dash "–" signifies zero. Three dots "..." mean not applicable, or that the base for the derived figure is too small for it to be shown. The symbol "NA" means not available.

Boundaries.—The data shown for 1970 relate to boundaries as they existed on January 1, 1970. Information on boundary changes between 1960 and 1970 for certain types of areas is given in the Volume I report for each State.

DATA COLLECTION PROCEDURES

The 1970 census was conducted primarily through self-enumeration. In 1960, self-enumeration was first introduced on a nationwide scale as a substitute for the traditional census direct interview.

A census questionnaire was delivered by postal carriers to every household several days before Census Day, April 1, 1970. This questionnaire contained certain explanatory information and was accompanied by an instruction sheet; in areas with comparatively large proportions of Spanish-speaking persons, a Spanish version of the instruction sheet was also enclosed. Facsimiles of the questionnaires and instructions to respondents are included in the Volume I reports.

In the larger metropolitan areas and some adjacent counties, altogether containing about three-fifths of the population of the United States, the householder was requested to fill out and mail back the form on Census Day. Approximately 87 percent of the householders returned their forms by mail. The mailed-back forms were reviewed by the census enumerator (or, in some localities, a census clerk) and if the form was determined to be incomplete or inconsistent, a followup was made. The bulk of these followups were made by telephone, the rest by personal visit. For the households which did not mail back their forms, a followup was also made, in almost all cases by personal visit and in the remainder by telephone.

For the remaining two-fifths of the population, the householder was requested to fill out the form and give it to the enumerator when he called; approximately 80 percent did so. Incomplete and unfilled forms were completed by interview during the enumerator's visit.

Three types of questionnaires were used throughout the country; 80 percent of the households answered a form containing a limited number of population and housing questions, and the remainder, split into 15-percent and 5-percent samples, answered forms which contained these questions as well as a number of additional questions. Some of the additional questions were the same on the 15-percent and 5-percent versions; others were different. A random procedure was used to determine which of the three forms any particular household answered.

In the metropolitan and adjacent areas, the designated type was sent to each household. In the remaining

areas, the questionnaire with a limited number of questions was distributed to all households, and the enumerators asked the additional questions in those households designated for the 15-percent and 5-percent samples.

PROCESSING PROCEDURES

The 1970 census questionnaires were specially designed to be processed by FOSDIC (Film Optical Sensing Device for Input to Computer). For most items on the questionnaire, the information supplied by the respondent or obtained by the enumerator was indicated by marking the answers in predesignated positions that would be "read" by FOSDIC from a microfilm copy of the questionnaire onto computer magnetic tape with no intervening manual processing. Among the items covered in these reports, however, a number required reviewing written entries to determine the proper code. Consequently, the processing involved a manual coding and editing operation in which clerks determined the appropriate codes and marked the specified positions on the questionnaire; for example, the clerks applied a 2-digit numerical code for the State-of-birth entry. These marks as well as those made by the respondent and enumerator were read by FOSDIC onto magnetic tape.

The tape containing the information from the questionnaires was processed on the Census Bureau's computers through a number of editing and tabulation steps (see Appendix D, "Accuracy of the Data"). Figures shown in this series of reports may differ from comparable figures in Volume I because of differences in processing.

One of the end results of the tabulation operation was a computer tape from which the tables in this report were prepared on a cathode-ray-tube phototypesetting machine at the Government Printing Office. Another end result was the summary tapes which are available for purchase, as described in Appendix E, "Publication and Computer Summary Tape Program."

USUAL PLACE OF RESIDENCE

In accordance with census practice dating back to 1790, each person enumerated in the 1970 census was counted as an inhabitant of his usual place of residence, which is generally construed to mean the place where he lives and sleeps most of the time. This place is not necessarily the same as his legal residence, voting residence, or domicile. In the vast majority of cases, however, the use of these different bases of classification would produce substantially the same statistics, although there may be appreciable differences for a few areas. (The Volume I reports of the 1970 Census of Population contain a more complete discussion of the residence rules for certain categories of persons whose usual place of residence is not immediately clear.)

URBAN AND RURAL RESIDENCE

Definition.—The urban population comprises all persons living in urbanized areas and in places of 2,500 inhabitants or more outside urbanized areas. More specifically, the urban population consists of all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, villages, boroughs (except Alaska), and towns (except in the New England States, New York, and Wisconsin), but excluding those persons living in the rural portions of extended cities;[1] (b) unincorporated places of 2,500 inhabitants or more; and (c) other territory, incorporated or unincorporated, included in urbanized areas. The population not classified as urban constitutes the rural population.

Farm and nonfarm residence.—The rural population is subdivided into the rural-farm population, which comprises all rural residents living on farms, and the rural-nonfarm population, which comprises the remaining rural population. As in the 1960 census, the farm population consists of persons living on places of 10 or more acres from which sales of farm products amounted to $50 or more in the preceding calendar year or on places of less than 10 acres from which sales of farm products amounted to $250 or more in the preceding year.

REGIONS AND GEOGRAPHIC DIVISIONS

For statistical presentation, the United States is sometimes divided into regions. The regions may be subdivided into geographic divisions, which are combinations of States. Generally, four regions are shown—Northeast, North Central, South, and West—but the first two may be combined into one region, the North. In reports that present statistics for regions, a map following the contents page shows the States included in each region and division.

[1] Extended cities are so designated because they have one or more large portions (normally at the boundary of the city) with relatively low population density. These portions are classified as rural, and the residents, as a rule, are not included in the urban population.

COUNTIES

The primary divisions of the States are, in general, termed counties, but in Louisiana these divisions are known as parishes. There are no counties in Alaska. In this State, statistical areas called census divisions were developed for general statistical purposes through the cooperation of the State and the Census Bureau and are treated as county equivalents. In four States (Maryland, Missouri, Nevada, and Virginia), there are one or more cities which are independent of any county organization and thus constitute primary divisions of their States.

URBANIZED AREAS

An urbanized area, generally, consists of at least one city of 50,000 inhabitants or more in 1970 and the surrounding closely settled area that meets certain criteria of population density or land use. An urbanized area may be subdivided into the central city or cities, and the remainder of the area or "urban fringe." The central city portion, generally, consists of the population of the city or cities named in the title of the urbanized area.

STANDARD METROPOLITAN STATISTICAL AREAS

Except in the New England States, a standard metropolitan statistical area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing

such a city or cities. contiguous counties are included in an SMSA if, according to certain criteria, they are socially and economically integrated with the central city or cities. In the New England States, SMSA's consist of towns and cities instead of counties.

Each SMSA must include at least one central city, and the complete title of an SMSA identifies the central city or cities.

The population living in SMSA's is designated as the metropolitan population. The population living outside SMSA's constitutes the nonmetropolitan population. The metropolitan population may be subdivided into those living in the central city or cities and those living in the balance of the SMSA.

GENERAL

As stated in Appendix A, the 1970 census was conducted primarily through self-enumeration. The principal determinant for the responses was, therefore, the questionnaire and its accompanying instruction sheet. Furthermore, census takers were instructed, in their telephone and personal-visit interviews, to read the questions directly from the questionnaire. The definitions and explanations given below for each subject are largely drawn from various technical and procedural materials used in the collection of the data. This material helped the enumerative personnel to understand more fully the intent of each question and thus to resolve problem or unusual cases in a manner consistent with this intent. Also included is certain explanatory information to assist the user in the proper utilization of the statistics. Some terms that are briefly defined in this report are more fully explained in the Volume I reports. Volume I also contains facsimiles of the questions and instructions to respondents. More complete definitions of the terms relating to the central subject of this report are presented in the introduction.

SOCIAL CHARACTERISTICS

Age.—The age classification is based on the age of the person in completed years as of April 1, 1970, and was determined from the reply to questions on age and on month and year of birth.

Race.—Information on race was obtained primarily through self-enumeration, and the data represent essentially self-classification by people according to the race with which they identify themselves. For persons of mixed parentage who were in doubt as to their classification, the race of the person's father was to be used.

The category "white" includes persons who indicated their race as white, as well as persons who did not classify themselves in one of the specific race categories on the questionnaire but entered Mexican, Puerto Rican, or a response suggesting Indo-European stock.

The category "Negro" includes persons who indicated their race as Negro or black, as well as persons who did not classify themselves in one of the specific race categories on the questionnaire but had such entries as Jamaican, Trinidadian, West Indian, Haitian, and Ethiopian. The term

"Negro and other races" includes persons of all races other than white.

The category "Indian" includes persons who indicated their race as American Indian or who did not indicate a specific race category but reported the name of an Indian tribe.

Additional race categories shown separately in some reports are Japanese, Chinese, Filipino, Hawaiian, Korean, Eskimo, and Aleut.

The residual category "all other races" appearing in some tables includes all races for which data are not shown separately in the particular table.

Nativity, place of birth, and parentage.—The category "native" comprises persons born in the United States, in the Commonwealth of Puerto Rico, in an outlying area of the United States, or at sea. Also included in this category is the small number of persons who, although they were born in a foreign country, have at least one American parent. Persons not classified as native are classified as foreign born. Native persons are classified according to their State or region of birth. Respondents were instructed to report place of birth in terms of the mother's usual State of residence at the time of the birth rather than in terms of the location of the hospital if the birth occurred in a hospital.

Information on birthplace of parents is used to classify the native population into two categories: "native of native parentage" and "native of foreign or mixed parentage." The category "native of native parentage" comprises native persons with both parents born in the United States. The category "native of foreign or mixed parentage" includes native persons with one or both parents foreign born. The rules for determining the nativity of parents are substantially the same as those for determining the nativity of the person himself.

The category "foreign stock" includes the foreign-born population and the native population of foreign or mixed parentage. Persons of foreign stock thus comprise all first- and second-generation Americans.

Country of origin.—Persons of foreign stock are classified according to their country of origin; that is, country of birth of the foreign born and birthplace of parents for native persons of foreign or mixed parentage. Respondents were instructed to report the country of birth according to international boundaries as recognized by the United States government on April 1, 1970. Native persons of foreign parentage whose parents were born in different foreign countries are classified according to the country of birth of the father.

Citizenship.—Citizens include foreign-born persons who reported that they had been naturalized and all persons classified as native (see definition above). Foreign-born persons who have not been naturalized are classified as alien.

Year of immigration.—The data on year of immigration relate to the foreign born and indicate the period covering the year when the person came to stay permanently in the United States.

Mother tongue.—Mother tongue refers to the language spoken in the person's home when he was a child. If both English and another mother tongue were reported, preference was given to the language other than English. The data on mother tongue may not reflect a person's current language skills since the vast majority of persons reporting a mother tongue other than English have learned to speak English during or after their childhood.

Spanish heritage.—The term "Spanish heritage" relates to statistics based on the 15-percent sample. The population of Spanish heritage is composed of population groups identified in various ways in different parts of the country, using information derived from the 15-percent sample. In 42 States and the District of Columbia, this population is identified as "persons of Spanish language"; in five Southwestern States, as "persons of Spanish language or Spanish surname"; and in the three Middle Atlantic States, as "persons of Puerto Rican birth or parentage." The specific definitions involved in identifying these population groups are given below.

Spanish language.—Persons of Spanish language comprise persons of Spanish mother tongue and all other persons in families in which the head or wife reported Spanish as his or her mother tongue.

Spanish surname.—In five Southwestern States (Arizona, California, Colorado, New Mexico, and Texas) persons with Spanish surnames were identified by means of a list of over 8,000 Spanish surnames originally compiled by the Immigration and Naturalization Service[1] (and later updated by the Bureau of the

[1] U.S. Immigration and Naturalization Service, **Supplement to Manual of Immigration, Spanish–Spanish Personal Names,** selected by Inspector George Lockwood, New York, 1936.

Census). The population of Spanish heritage in the five Southwestern States consists of persons of Spanish language combined with all other persons of Spanish surname.

Puerto Rican birth or parentage.—The population of Puerto Rican birth or parentage includes persons born in Puerto Rico and persons born in the United States or an outlying area with one or both parents born in Puerto Rico. The population of Spanish heritage in New York, New Jersey, and Pennsylvania consists of persons of Puerto Rican birth or parentage.

Spanish origin.—The term "Spanish origin" relates to statistics based on the 5-percent sample. A person is classified as being of Spanish origin if his or her reply to the question on origin or descent was any of the following: Mexican, Puerto Rican, Cuban, Central or South American, or other Spanish.

Year moved into present house.—The data on year moved into present house refer to the most recent move the person made. Thus, a person who had moved back into the same house (or apartment) in which he had previously lived was asked to give the date at which he began the present occupancy. If a person had moved from one apartment to another in the same building, he was expected to give the year when he moved into the present apartment.

Residence in 1965.--Information on residence in 1965 was obtained from both the 15-percent and the 5-percent samples, but the information from the 5-percent sample relates to State of residence only. Residence on April 1, 1965, is the usual place of residence 5 years before enumeration. The information was used in conjunction with residence in 1970 to determine the extent of residential mobility of the population. The category "same house" includes all persons 5 years old and over who did not move during the 5 years, as well as those who had moved but by 1970 had returned to their 1965 residence.

Persons who changed residence from 1965 to 1970 are classified into groups according to type of move. The category "different house in United States" includes persons who, on April 1, 1965, lived in the United States in a different house from the one they occupied on April 1, 1970, and for whom sufficient information concerning the 1965 residence was collected. This group (also referred to as "movers") is divided into three subgroups according to their 1965 residence: "different house, same county," "different county, same State," and "different State." The second and third groups comprise the population classified as "migrants." The category "abroad" includes those with residence in a foreign country or an outlying area of the United States in 1965, including Armed Forces stationed overseas. Persons 5 years old and over who indicated they had moved into their present residence after April 1, 1965, but for whom sufficiently complete and consistent information regarding residence on April 1, 1965, was not collected, are included in the group "moved, 1965 residence not reported."

School enrollment.—Persons were included as enrolled in school if they reported attending a "regular" school or college at any time between February 1, 1970, and the time of enumeration. Regular schooling is that which may advance a person toward an elementary school certificate or high school diploma, or a college, university, or professional degree. Schooling that was not obtained in a regular school and schooling from a tutor or through correspondence courses were counted only if the credits obtained were regarded as transferable to a school in the regular school system. Persons were included as enrolled in nursery school only if the school included instruction as an important and integral phase of its program.

Schooling which is generally regarded as *not* "regular" includes that given in nursery schools which simply provide custodial day care; in specialized vocational, trade, or business schools; in on-the-job training; and through correspondence courses.

Level and year of school in which enrolled.—The levels of school which may be separately identified in census statistics are nursery school, kindergarten, elementary school, high school, and college. Children in "Head Start" or similar programs are counted under "Nursery" or "kindergarten" as appropriate. Elementary school, as defined here, includes grades 1 to 8, and high school includes grades 9 to 12. If a person was attending a junior high school, the equivalent in terms of 8 years of elementary school and 4 years of high school was obtained. The term "college" includes junior or community colleges, regular 4-year colleges, and graduate or professional schools.

The term "mode for age" relates to relative progress in shcool, in terms of whether the grade in which a person is enrolled is below, at, or above the modal, or typical

grade for a person that age. To avoid a bimodal effect which resulted when modes were based on age as of April 1, 1970, the data were adjusted to age as of October 1, 1969. The resulting modes are grade 1 of elementary school for age 6 and one grade higher for each additional year of age up to age 17.

Public, parochial, or other private school.—In general, a "public" school is defined as any school which is controlled and supported primarily by a local, State, or Federal government agency. A "parochial" school is defined here as a private school which is controlled or supported primarily by a religious organization. An "other private" school is defined as a school controlled or supported primarily by private groups other than religious organizations.

Years of school completed.—The information on years of school completed was based on responses to two questions. The first called for the highest grade attended, regardless of "skipped" or "repeated" grades. Persons whose highest grade of attendance was in a foreign school system, or in an ungraded school whose highest level of schooling was measured by "readers," or whose training was received through a tutor were instructed to report the approximate equivalent grade in the regular United States school system. The second question on educational attainment asked whether or not the highest grade attended had been finished.

The number in each category of highest grade of school completed represents the combination of (a) persons who reported that they had attended the indicated grade and had finished it, (b) those who had attended the next higher grade but had not finished it, and (c) those still attending the next higher grade. Persons who have not completed the first year of elementary school are classified as having no years of school completed.

Vocational training.—Included as "vocational training" are formal vocational training programs completed in high school, through an apprenticeship program, in a school of business, in a nursing school or trade school, in a technical institute, in the Armed Forces, or in Job Corps Training. Excluded from "vocational training" programs are single courses which were not part of an organized program of study, on-the-job training, training in company schools, training by correspondence, and basic training in the Armed Forces. Persons who reported having completed a vocational training program were asked to designate their main field of vocational training.

Veteran status.—As defined in this report, a "veteran" is a male 16 years old or over who has served but is not now serving in the Armed Forces of the United States. All other civilian males 16 years old and over are classified as nonveterans. In the classification by period of service, veterans with more than one period of service are generally classified according to the most recent wartime period; however, veterans with both Korean and World War II service are recognized in a separate category.

Marital status.—The marital status classification refers to the status at the time of enumeration. Persons classified as "married" consist of those who have been married only once and those who remarried after having been widowed or divorced. Persons reported as separated (either legally separated or otherwise absent from their spouse because of marital discord) are classified as a subcategory of married persons. Persons in common-law marriages are classified as married, and persons whose only marriage was annulled are classified as never married. Persons classified as never married are shown as "single."

Married persons with "spouse present" are men or women whose wife, or husband, was enumerated as a member of the same household even though he or she may have been temporarily absent on business or vacation, visiting, in a hospital, etc., at the time of enumeration. Married persons with "spouse absent" include both those who are separated because of marital discord and those whose usual place of residence is different from that of their spouse for other reasons, such as service in the Armed Forces or employment at a considerable distance from home.

Marital history.—For all persons in the 5-percent sample reported as married (including separated), widowed, or divorced at the time of the enumeration, data were obtained on the date of the first marriage. From this information and from current age, data on age at first marriage were derived. For each person who had been married more than once, information was obtained on the reason for termination of the first marriage. Persons shown as "known to have been widowed" include widowed persons and those currently married or divorced persons whose first marriage ended in widowhood. Persons shown as "known to have been divorced" include divorced persons and those currently married or widowed persons whose first marriage did not end in widowhood.

Household.—A household includes all persons who occupy a group of rooms or a single room which constitutes a housing unit. A group of rooms or single room is regarded as a housing unit when it is occupied as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside of the building or through a common hall or (2) complete kitchen facilities for the exclusive use of the occupants of the household.

Relationship to head of household.—Several categories of relationship to head of household are recognized in census reports.

Head of household.— One person in each household is designated as the "head," that is, the person who is regarded as the head by the members of the household. However, if a married woman living with her husband was reported as the head, her husband was considered the head for the purpose of simplifying the tabulations.

Two types of household head are distinguished—the head of a family and a primary individual. A family head is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Wife of head.—A woman married to and living with a household head, including women in common-law marriages as well as women in formal marriages.

Child of head.—A son, daughter, stepchild, or adopted child of the head of the household of which he is a member, regardless of the child's age or marital status. The category excludes sons-in-law and daughters-in-law. (See definition of "own child" below.)

Other relative of head.—Any person related to the household head by blood, marriage, or adoption, who is not included in one of the specific relationship categories shown in the particular table.

Not related to head.—All persons in the household not related to the head by blood, marriage, or adoption. Roomers, boarders, lodgers, partners, resident employees, wards, and foster children are included in this category.

Group quarters.—All persons not living in households are classified by the Bureau of the Census as living in group quarters. Group quarters are located most frequently in institutions, rooming houses, military barracks, college dormitories, fraternity and sorority houses, hospitals, monasteries, convents, and ships. A house or apartment is classified as group quarters if there are five or more persons unrelated to the head; or, when no head is designated, if six or more unrelated persons share the unit. Certain types of living quarters, e.g., college dormitories and military barracks, are classified as group quarters regardless of the number of persons in the unit. Two general categories of persons in group quarters are recognized: inmates of institutions and all other persons in group quarters.

Inmate of institution.—Persons under care or custody in institutions at the time of enumeration are classified as "inmate of institution" regardless of their length of stay in that place and regardless of the number of people in that place. Institutions are a subcategory of group quarters and include homes, schools, hospitals, or wards for juveniles, for the physically handicapped, or for the mentally handicapped; hospitals for mental, tubercular, or chronic disease patients; homes for unwed mothers; nursing, convalescent and rest homes; homes for the aged and dependent; and correctional institutions.

Married couple.—A married couple is defined as a husband and his wife enumerated as members of the same household. The number of married couples, as shown in this report, is identical to the number of married men with wife present.

A "married couple with own household" is a married couple in which the husband is a household head; the number of such married couples is the same as the number of "husband-wife families." Married couples without own household are, by census definition, the same as married couples in subfamilies.

Family and subfamily.—According to 1970 census definitions, a family consists of a household head and one or more other persons living in the same household who are related to the head by blood, marriage, or adoption; all persons in a household who are related to the head are regarded as family members. A "husband-wife family" is a family in which the head and his wife are enumerated as members of the same household. Not all households contain families, because the household head may be living alone or with nonrelatives only. The mean size of family is derived by dividing the number of persons in families by the total number of families.

A subfamily is a married couple with or without children, or one parent with one or more single children under 18 years old, living in a household and related to, but not including, the head of the household or his wife. The most common example of a subfamily is a young married couple sharing the home of the husband's or wife's parents. Members of a subfamily are also included among the members of a family. The number of subfamilies, therefore, is not included in the number of families.

Own child and related child.—Statistics on the presence of "own" children may be shown for married couples, families, subfamilies, or women ever married. An "own child" is a child under 18 years of age reported as a single (never married) son, daughter, stepchild, or adopted child of the specified person(s). The term "sons/daughters" is used when the designated group includes children 18 years old and over; the term includes all sons and daughters regardless of marital status or age. The number of "children living with both parents" includes stepchildren and adopted children as well as sons and daughters born to the couple.

The term "related children" includes not only "own" children, as defined above, but also all other family members, regardless of marital status, who are under 18 years old (except the head or wife).

Unrelated individual.—An unrelated individual may be (1) a household head living alone or with nonrelatives only, (2) a household member who is not related to the head, or (3) a person living in group quarters who is not an inmate of an institution. Unrelated individuals who are household heads are called "primary individuals"; those who are not household heads are called "secondary individuals." In tables on income and poverty status, unrelated individuals are limited to those 14 years of age or older. In statistics on poverty status of unrelated individuals, college students living in dormitories and members of the Armed Forces living in barracks are excluded.

Children ever born.—In reporting statistics on children ever born, respondents were instructed to include children born to the woman before her present marriage, children no longer living, and children away from home, as well as children born to the woman who were still living in the home.

Work disability.—The information on disability was used to identify persons hindered because of a health or physical condition from working at a job. The question refers to a serious illness that has lasted (or is likely to last) for a relatively long time, or a serious physical or mental impairment, defect, or handicap. Also determined was whether such persons were able to work at all and how long each person had been limited in his working ability.

ECONOMIC CHARACTERISTICS

Employment status.—According to current definition, the labor force and the various employment status categories relate to the population 16 years old and over. However, in this series of reports, data are sometimes shown for persons 14 and 15 years old as well.

Reference week.—Data on employment status refer to the calendar week prior to the date on which respondents completed their questionnaires or were interviewed by enumerators. Since the week of enumeration was not the same for all persons, the reference week for employment data is not entirely uniform.

Employed.—Employed persons comprise all civilians 16 years old and over who were either (a) "at work"—those who did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a family farm or in a family business; or (b) were "with a job but not at work"—those who did not work during the reference week but had jobs or businesses from which they were temporarily absent due to illness, bad weather, industrial dispute, vacation, or other personal reasons. Excluded from the employed are persons whose only activity consisted of work around the house or volunteer work for religious, charitable, and similar organizations.

Unemployed.—Persons are classified as unemployed if they were civilians 16 years old and over and: (a) were neither "at work" nor "with a job, but not at work" during the reference week, (b) were looking for work during the past 4 weeks, and (c) were available to accept a job.

Also included as unemployed are persons who did not work at all during the reference week and were waiting to be called back to a job from which they had been laid off.

Experienced unemployed.—Unemployed persons who have worked at any time in the past are classified as the "experienced unemployed."

Civilian labor force.—The civilian labor force consists of persons classified as employed or unemployed in accordance with the criteria described above.

Experienced civilian labor force.—The "experienced civilian labor force" comprises the employed and experienced unemployed.

Labor force.—The labor force includes all persons classified in the civilian labor force plus members of the Armed Forces (persons on active duty with the United States Army, Air Force, Navy, Marine Corps, or Coast Guard).

Not in labor force.—All persons 16 years old and over who are not classified as members of the labor force are defined as "not in labor force." This category consists mainly of students, housewives, retired workers, seasonal workers enumerated in an "off" season who were not looking for work, inmates of institutions, disabled persons, and persons doing only incidental unpaid family work (less than 15 hours during the reference week).

Hours worked.—The statistics on hours worked relate to persons "at work" during the reference week and represent the number of hours actually worked at all jobs during that week. They do not necessarily reflect the number of hours usually worked or the scheduled number of hours. The category "at work, full-time" includes persons who worked 35 hours or more during the reference week, and the category "at work, part-time" includes persons who worked 1 to 34 hours during the reference week.

Weeks worked in 1969.—Data on weeks worked pertain to the number of weeks during 1969 in which a person did any work for pay or profit (including paid vacation and sick leave) or worked without pay on a family farm or in a family business. Weeks of active service in the Armed Forces are also included.

Year last worked.—The "year last worked" pertains to the most recent year in which a person did any work for pay or profit, or worked without pay on a family farm or in a family business, or was on active duty in the Armed Forces.

Place of work.—Place of work refers to the geographic location at which civilians and Armed Forces personnel not on leave carried out their occupational or job activities during the calendar week prior to the date on which respondents completed their questionnaires or were interviewed by enumerators.

Means of transportation to work.—Means of transportation to work refers to the chief means (i.e., covering the greatest distance) of travel or type of conveyance used in traveling to and from work on the last day the respondent worked at the address given as his or her place of work.

Occupation and industry.—For employed persons the data on occupation and industry refer to the job held during the reference week. For persons employed at two or more jobs, the data refer to the job at which the person worked the greatest number of hours. For the unemployed with work experience and for persons not currently in the labor force who worked at some time after 1959, these data refer to the last job the person held. The occupation and industry statistics presented here are based on the detailed systems developed for the 1970 census: see 1970 Census of Population, **Classified Index of Industries and Occupations**, U.S. Government Printing Office, Washington, D.C., 1971.

The major occupation groups are sometimes combined into four divisions, as follows:

White collar.—Professional, technical, and kindred workers; managers and administrators, except farm; sales workers; and clerical and kindred workers.

Blue collar.—Craftsmen and kindred workers; operatives, except transport; transport equipment operatives; and laborers, except farm.

Farm workers.—Farmers and farm managers, farm laborers and farm foremen.

Service workers.—Service workers including private households.

The sequence in which these four divisions appear is not intended to imply that any division has a higher social or skill level than another.

Class of worker.—The information on class of worker refers to the same job as the information on occupation and industry. There are two major class-of-worker categories:

1. Wage and salary workers are persons who work for an employer for wages, salary, commission, tips, pay in kind, or pay at piece rates. This category may be subdivided into government or private. Government workers include employees of any Federal, State, or local governmental unit, regardless of the activity of the particular agency.

2. Self-employed workers are those who work for profit or fees in their own unincorporated business, profession, or trade, or who operate a farm. Also included in this group are the small number of "unpaid family workers," i.e., persons working without pay in a business operated by a person to whom they are related by blood, marriage, or adoption.

Activity 5 years ago.— A person is classified as a "worker in 1965" if he answered "yes" to either (a) working or (b) in the Armed Forces. All other persons are classified as nonworkers in 1965. The number of workers in 1965 may be understated, since there is a tendency for respondents to forget intermittent or short periods of employment.

Occupation 5 years ago.— Classification by occupation 5 years ago was based on the **Classified Index of Industries and Occupations,** referred to above. There are indications that, because of failure of the respondent to recall accurately, the responses on occupation in 1965 are subject to greater error than those on current occupation. Therefore, the occupational classification in 1965 is restricted to the major occupation group.

Income in 1969.—Information on money income received in the calendar year 1969 was requested from all persons 14 years old and over. "Total income" is the algebraic sum of amounts received as wage or salary income, self-employment income, and income other than earnings. Wage or salary income is defined as the total money earnings received for work performed as an employee. It represents the amount received before deductions for personal income taxes, Social Security, bond purchases, union dues, etc. Self-employment income is defined as net money income (gross receipts minus operating expenses) from a business, farm, or professional enterprise in which the person was engaged on his own account. Self-employment income may be subdivided into farm and nonfarm self-employment income. Earnings is the algebraic sum of wage or salary income and self-employment income. Income other than earnings includes money income received from such sources as interest, dividends, net rental income, Social Security benefits, pensions, veterans' payments, unemployment insurance, and public assistance or other governmental payments, and periodic receipts from insurance policies or annuities. Not included as income are money received from the sale of property (unless the recipient was engaged in the business of selling such property), the value of income "in kind," withdrawals of bank deposits, money borrowed, tax refunds, and gifts and lump-sum inheritances or insurance payments.

Family income is computed by summing the income of all family members 14 years old and over; whereas, the income of unrelated individuals or persons 14 years old and over includes only their own income.

The income data presented in census reports are not directly comparable with estimates of aggregate personal income or per capita personal income prepared by the Bureau of Economic Analysis (BEA), formerly the Office of Business Economics, nor with the distribution of families and individuals by personal income brackets previously published by that agency. For a detailed explanation of the difference between the Census and BEA income definitions and coverage, see U.S. Bureau of the Census, **Current Population Reports,** Series P-60, No. 75, "Income in 1969 of Families and Persons in the United States" or the 1970 Census of Population Volume I reports.

Poverty status in 1969.—Families and unrelated individuals are classified as being above or below the poverty level, using the poverty index adopted by a Federal Interagency Committee in 1969. This index provides a range of income cutoffs or "poverty thresholds" adjusted to take into account such factors as family size, sex and age of the family head, the number of children, and farm-nonfarm residence. The poverty cutoffs for farm families have been set at 85 percent of the nonfarm levels. These income cutoffs are updated every year to reflect the changes in the Consumer Price Index. The average poverty threshold for a nonfarm family of four was $3,743 in 1969. For a detailed explanation of the poverty definition, see the Volume I reports of the 1970 Census of Population.

HOUSING CHARACTERISTICS

Housing units.—A housing unit is a house, an apartment, a group of rooms, or a single room occupied or intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants do not live and eat with any other persons in the structure and which quarters have either (1) direct access from the outside of the building or through a common hall or (2) complete kitchen facilities for the exclusive use of the occupants. For vacant units, the criteria for separateness, direct access,

and complete kitchen facilities for exclusive use are applied to the intended occupants whenever possible (or to the previous occupants if this information cannot be obtained). Both occupied and vacant housing units are included in the housing inventory, except that mobile homes, trailers, boats, tents, etc., are included only if they are occupied.

Occupied housing units.—A housing unit is classified as occupied if a person or group of persons is living in it at the time of enumeration or if the occupants are only temporarily absent, for example, on vacation. However, if the persons staying in the unit have their usual place of residence elsewhere the unit is classified as vacant. A housing unit can be occupied by a family, a family and unrelated persons living together, a group of unrelated persons living together, or by one person.

For each occupied housing unit there is one household. The former term refers to a type of living quarters and the latter term refers to the persons who occupy the quarters. Thus, the total number of households in the United States is equal to the total number of occupied housing units in the United States.

Vacant housing units.—A housing unit is vacant if no one is living in it at the time of enumeration, unless its occupants are only temporarily absent. In addition, a vacant unit may be one which is occupied entirely by persons who have a usual residence elsewhere.

Vacant housing units may be classified as either "seasonal and migratory" (i.e., intended for seasonal occupancy or held for migratory labor) or "year-round." "Seasonal" units are intended for occupancy during only certain seasons of the year. "Migratory" units are vacant units held for occupancy by migratory labor employed in farm work during the crop season. "Year-round" vacant housing units are available or intended for occupancy at any time of the year. A unit in a resort area which is usually occupied on a year-round basis is considered year-round. A unit used only occasionally throughout the year is also considered year-round.

Year-round vacant units are subdivided as follows: "for sale only"; "for rent" which also includes vacant units offered either for rent or for sale; and "other" which includes units sold or rented but not yet occupied by the new owner or renter, units held for the occasional use of the owner, and units being held off the market for other reasons.

Tenure.—A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. A cooperative or condominium unit is "owner occupied" only if the owner or co-owner lives in it. All other occupied units are classified as "renter occupied," including units rented for cash rent and those occupied without payment of cash rent.

Year moved into unit.—Data on year moved into unit are based on the information reported for the head of the household. The question refers to the year of latest move. Thus, if the head moved back into a unit he had previously occupied or if he moved from one apartment to another in the same building, the year he moved into his present unit was to be reported.

Persons.—Persons occupying the housing unit include not only occupants related to the head of the household but also any lodgers, roomers, boarders, partners, wards, foster children, and resident employees who share the living quarters of the household head. The data on "persons" show the number of housing units occupied by the specified number of persons. In some reports, units with one or more roomers, boarders, or lodgers are shown as a separate category. Not included as "roomers, boarders, or lodgers" are servants who live in, companions, and partners.

Rooms.—Rooms to be counted include whole rooms used for living purposes, such as living rooms, dining rooms, kitchens, bedrooms, finished recreation rooms, family rooms, etc. Not counted as rooms are bathrooms, porches, balconies, foyers, halls, half-rooms, kitchenettes, strip or pullman kitchens, utility rooms, unfinished attics, basements, or other space used for storage.

Persons per room.—This is computed by dividing the number of persons in the unit by the number of rooms in the unit. The figures shown, therefore, refer to the number of housing units having the specified ratio of persons per room.

Year structure built.—Year structure built refers to when the building was first constructed, not when it was remodeled, added to, or converted.

Units in structure.—In the determination of the number of units in a structure, all housing units, both occupied and vacant, were counted. The statistics are presented in terms of the number of occupied housing units in structures of specified size, not in terms of the number of residential structures.

A structure is a separate building that either has open space on all sides or is separated from other structures by dividing walls that extend from ground to roof. Structures containing only one housing unit may be further classified as detached or attached.

In some reports, mobile homes and trailers are shown as a separate category. When one or more rooms have been added to a mobile home or trailer, it is classified as a one-family house. If, however, only a porch or shed has been added, it is still counted as a mobile home or trailer.

Stories in structure.—Statistics on stories in structure are presented in terms of the number of housing units in structures with a specified number of floors. For housing units in structures with four stories or more, information is also given on whether the structure has a passenger elevator.

Plumbing facilities and equipment.—The category "with all plumbing facilities" consists of units which have hot and cold piped water, as well as a flush toilet and a bathtub or shower inside the structure for the exclusive use of the occupants of the unit. "Lacking some or all plumbing" means that the unit does not have all three specified plumbing facilities (hot and cold piped water, as well as flush toilet and bathtub or shower inside the structure), or that the toilet or bathing facilities are also for the use of the occupants of other housing units.

With more than one bathroom.—A housing unit is classified as having a complete bathroom if it has a room with a flush toilet and bathtub or shower for the exclusive use of the occupants of the unit and a wash basin, as well as piped hot water in the structure. A partial or half bathroom has at least a flush toilet or bathtub (or shower), but does not have all the facilities for a complete bathroom. A housing unit "with more than one bathroom" has, in addition to one complete bathroom, one or more partial or complete bathrooms.

With public water supply.—A public system refers to a common source supplying running water to six or more housing units. The water may be supplied by a city, county, water district, or private water company, or it may be obtained from a well which supplies six or more housing units.

With public sewer.—A "public sewer" is connected to a city, county, sanitary district, neighborhood, or subdivision sewer system. It may be operated by a government body or by a private organization. Small sewage treatment plants which in some localities are called neighborhood septic tanks are also classified as public sewers.

Heating equipment.—The list of heating equipment refers to the type of heating equipment and not to the fuel used. "Steam or hot water" refers to a central heating system in which heat from steam or hot water is delivered through radiators or other outlets. "Warm-air furnace" refers to a central system which provides warm air through ducts leading to various rooms; central heat pumps are included in this category. "Built-in electric units" are permanently installed in the floors, walls, or ceilings. A "floor, wall, or pipeless furnace" delivers warm air to the room right above the furnace or to the room(s) on one or both sides of the wall in which the furnace is installed. "Other means" includes room heaters with or without flue, fireplaces, stoves, and portable heaters of all types.

A housing unit with "central or built-in heating system" contains a steam or hot water system, a warm-air furnace, built-in electric units, or a floor, wall, or pipeless furnace.

Air conditioning.—Air conditioning is the cooling of air by a refrigeration unit. A central system is a central installation which air-conditions the entire housing unit. A room unit is an individual air conditioner which is installed in a window or an outside wall and is generally intended to cool one room, although it may sometimes be used to cool more than one room.

Automobiles available.—Statistics on automobiles available represent the number of passenger automobiles, including station wagons, which are owned or regularly used by any member of the household and which are ordinarily kept at home. Taxicabs, pickups, or larger trucks were not to be counted.

Telephone.—A unit is classified as having a telephone if there is a telephone available to the occupants of the unit for receiving calls. The telephone may be located outside or inside the housing unit, and one telephone may serve the occupants of several units. The number of housing units with a telephone available, therefore, does not indicate the number of telephones installed in homes.

Appliances.—In some reports, statistics are presented for the number of housing units with the following appliances:

Clothes washing machine.—This category includes wringer or spinner machines and automatic or semi-automatic machines. Washer-dryer combinations are also included in this group.

Clothes dryer.—A clothes dryer is a mechanical appliance in which clothes are dried by heated air. A unit with a washer-dryer combination is classified as having a clothes dryer (as well as an automatic clothes washing machine).

Dishwasher.—This category includes both built-in and portable dishwashers.

Home food freezer.—A home food freezer is an appliance, separate from the refrigerator, designed for freezing food and for storing frozen food.

Television.—Sets of all kinds are included in the count—floor, table, built-in, portable, and combination with radio or phonograph, whether "black and white" or "color."

Battery-operated radio.—As stated on the questionnaire, car radios, transistor radios, and other battery-operated radio sets are included.

Value.—Value is the respondent's estimate of how much the property (house and lot) would sell for if it were for sale. The term "specified owner-occupied units" means that the value data are limited to owner-occupied one-family houses on less than ten acres, without a commercial establishment or medical office on the property. Owner-occupied cooperatives, condominiums, mobile homes, and trailers are excluded from the value tabulations.

Mean value.—Mean value is the sum of the individual values reported, divided by the number of owner-occupied units for which value is shown. For purposes of computation, the midpoints of the intervals were used, except that a mean value of $3,500 was assigned to housing units in the interval "less than $5,000" and a mean of $60,000 was assigned to units in the interval "$50,000 or more."

Value-income ratio.—The value-income ratio is computed by dividing the value of the property (house and lot) by the total income in 1969 of the family or primary individual. The ratio was computed separately for each unit and was rounded to the nearest tenth. The statistics are limited to owner-occupied one-family houses on less than 10 acres, without a commercial establishment or medical office on the property. Owner-occupied cooperatives, condominiums, mobile homes, and trailers are excluded, as well as units occupied by families or primary individuals who reported no income or a net loss.

Contract rent.—Contract rent is the monthly rent agreed to, or contracted for, even if the furnishings, utilities, or services are included. The term "specified renter-occupied units" means that the contract rent data exclude one-family houses on ten acres or more. In some reports, renter units occupied without payment of cash rent are shown separately as "no cash rent" in the rent tabulations.

Gross rent.—Monthly gross rent is the summation of contract rent plus the estimated average monthly cost of utilities (water, electricity, gas) and fuels (oil, coal, kerosene, wood, etc.), if these items are paid for by the renter, in addition to rent. Thus, gross rent is intended to eliminate individual differences which result from varying practices with respect to the inclusion of heat and utilities as part of the rental payment. The data exclude one-family houses on ten acres or more.

Mean gross rent.—Mean gross rent is the sum of the individual rental amounts divided by the number of renter-occupied units, excluding one-family houses on ten acres or more and units occupied without payment of cash rent.

Gross rent as percentage of income.—The yearly gross rent (monthly gross rent multiplied by 12) is expressed as a percentage of the total income in 1969 of the family or primary individual. The percentage was computed separately for each unit and was rounded to the nearest whole number. The statistics exclude one-family housing units on ten acres or more, units occupied without payment of cash rent, and units occupied by families or primary individuals who reported no income or a net loss.

Appendix D.—ACCURACY OF THE DATA

SOURCES OF ERROR App-16
EDITING OF UNACCEPTABLE DATA App-16
ALLOCATION TABLES App-16
SAMPLE DESIGN App-17
RATIO ESTIMATION App-17
SAMPLING VARIABILITY App-19

SOURCES OF ERROR

Human and mechanical errors occur in any mass statistical operation such as a decennial census. Errors during the data collection phase can include failure to obtain required information from respondents, obtaining incorrect or inconsistent information, and recording information in the wrong place or incorrectly. Errors can also occur during the field review of the enumerator's work, the clerical handling of the questionnaires, and the various stages of the electronic processing of the material. Careful efforts are made in every census to keep the errors in each step at an acceptably low level. Quality control and check measures are utilized throughout the census operation. As was done for the 1950 and 1960 censuses, evaluative material on many aspects of the 1970 census will be published as soon as the appropriate data are accumulated and analyzed.

EDITING OF UNACCEPTABLE DATA

The objective of the processing operation is to produce a set of statistics that describes the population as accurately and clearly as possible. To meet this objective, certain unacceptable entries were edited.

In the field, questionnaires were reviewed for completeness by a census clerk or enumerator, and a followup was made for missing information. The major review occurred in the central processing office, where the editing and coding operation provided an opportunity to correct obvious errors in the respondents' entries for those items which required manual processing.

For a few of the items, the respondents' entries were reviewed for reasonableness or consistency on the basis of other information on the questionnaire. As a rule, however, editing was performed by hand only when it could not be done effectively by machine.

Because of the limitations of computer capacity and other resources, a number of complicated editing steps were not introduced when the effect on the final data was considered to be small. Thus, there may be a small number of cases having unlikely combinations of characteristics.

As one of the first steps in mechanical editing, the configuration of marks on the questionnaire was scanned electronically to determine whether it contained information for a person or merely spurious marks. If the questionnaire contained entries for at least two of the basic characteristics (relationship, sex, race, age, marital status), or for at least two relevant sample characteristics, the inference was made that the marks represented a person. Names were not used as a criterion of the presence of a person because the electronic scanning was unable to distinguish between a name and any other entry in the name space.

If any characteristics for a person were missing, they were, in most cases, supplied by allocation. Allocations, or assignments of acceptable codes in place of unacceptable entries, were needed most often where an entry for a given item was lacking or where the information reported for a person on that item was inconsistent with other information for the person. As in earlier censuses, the general procedure for changing unacceptable entries was to assign an entry that was consistent with entries for other persons with similiar characteristics. Thus, a person who was reported as a 20-year-old son of the household head, but for whom marital status was not reported, was assigned the same marital status as that of the last son processed in the same age group. The assignment of acceptable codes in place of blanks or unacceptable entries, it is believed, enhances the usefulness of the data.

The editing process also includes another type of correction; namely, the assignment of a full set of characteristics for a person. When there was indication that a housing unit was occupied but the questionnaire contained no information for any person, a previously processed household was selected as a substitute and the full set of characteristics for each substitute person was duplicated.

Specific tolerances were established for the number of computer allocations and substitutions that would be permitted. If the number of corrections was beyond tolerance, the questionnaires in which the errors occurred were clerically reviewed. If it was found that the errors resulted from damaged questionnaires, from improper microfilming, from faulty reading by FOSDIC of undamaged questionnaires, or from other types of machine failure, the questionnaires were reprocessed.

ALLOCATION TABLES

Some of the Volume II reports contain tables presenting allocation rates for the principal subject of the report and

showing the extent of allocation of that characteristic cross-classified by other selected characteristics. When such tables are included, they follow the numbered tables and are discussed in the introduction of the report. Additional allocation tables presented in Volume I, Part 1, **Characteristics of the Population, United States Summary** (tables C-1 to C-4) include rates for most of the subjects covered in the census. The information shown in these tables includes (1) the percent of the total population enumerated in the sample, (2) the allocation rate for each subject, and (3) the distributions for each subject before allocation. For a given subject the distribution before allocation may be compared with the corresponding statistics shown in the detailed tables to measure the net effect of allocation. Further explanation of the allocation tables is included in Appendix C of the Volume I reports.

SAMPLE DESIGN

For persons living in housing units at the time of the 1970 census, the housing unit, including all its occupants, was the sampling unit; for persons in group quarters identified in advance of the census, the sampling unit was the person. In nonmail areas, the enumerator canvassed his assigned area and listed all housing units in an address register sequentially in the order in which he first visited the units whether or not he completed the interview. Every fifth line of the address register was designated as a sample line, and the housing units listed on these lines were included in the sample. Each enumerator was given a random line on which he was to start listing and the order of canvassing was indicated in advance, although the instructions allowed some latitude in the order of visiting addresses. In mail areas, the list of housing units was prepared prior to Census Day either by employing commercial mailing lists corrected through the cooperation of the post office or by listing the units in a process similar to that used in nonmail areas. As in other areas, every fifth housing unit of these lists was designated to be in the sample. In group quarters, all persons were listed and every fifth person was selected for the sample.

This 20-percent sample was subdivided into a 15-percent and a 5-percent sample by designating every fourth 20-percent sample unit as a member of the 5-percent sample. The remaining sample units became the 15-percent sample. Two types of sample questionnaires were used, one for the 5-percent and one for the 15-percent sample units. Some questions were included on both the 5-percent and 15-percent sample forms and therefore appear for a sample of 20 percent of the units in the census.

Other items appeared on either the 15-percent or the 5-percent questionnaires. An item collected on a 20-percent basis may have been tabulated on a 15- or 5-percent basis. The sample rate for tabulation is shown in the headnote of the table if the entire table is based on the same sample. For tables having figures based on different samples, the sample rates are explained under the heading "Sample size" in the introduction.

Although the sampling procedure did not automatically insure an exact 20-percent sample of persons or housing units in each locality, the sample design was unbiased if carried through according to instructions; generally for larger areas the deviation from 20 percent was found to be quite small. Biases may have arisen, however, when the enumerator failed to follow his listing and sampling instructions exactly. Quality control procedures were used throughout the census process, however, and where there was clear evidence that the sampling procedures were not properly followed, some enumerators' assignments were returned to the field for resampling. For the United States as a whole 19.4 percent of the population and 19.6 percent of the housing units were enumerated in the sample. The bases for these percentages included several classes of the population for which no attempt at sampling was made. These were the relatively small numbers of persons and housing units (in most States, less than one percent) added to the enumeration from the post-census post office check, the various supplemental forms, and the special check of vacant units. (If these classes are excluded from the bases, the respective proportions become 19.6 and 19.7 percent.) The ratio estimation procedure described below adjusts the sample data to reflect these classes of population and housing units.

RATIO ESTIMATION

The statistics based on 1970 census sample data are estimates made through the use of ratio estimation procedures, which were applied separately for population and for housing data for each of the 5-, 15-, and 20-percent samples. The first step in carrying through the ratio estimates was to establish the areas within which separate ratios were to be prepared. These are referred to as "weighting areas." For the 15- and 20-percent samples, the weighting areas contained a minimum population size of 2,500. The weighting areas used for the

5-percent ratio estimate were larger areas, having a minimum population size of 25,000 and comprising combinations of the weighting areas used for the 15- and 20-percent samples. Weighting areas were established by a mechanical operation on the computer and were defined to conform, as nearly as possible, to areas for which tabulations are produced. Where these areas do not agree (primarily for smaller areas), there may be some differences between complete counts and sample estimates.

The ratio estimation process for population operated in three stages. The first stage employed 19 household-type groups (the first of which was empty by definition). The second stage used two groups, head of household and not head of household, and the third stage used 24 age-sex-race groups.

Group	
	STAGE I
	Male head with own children under 18
1	1-person household
2	2-person household
3	3-person household
.	.
.	.
6	6-or-more-person household
	Male head without own children under 18
7-12	1-person to 6-or-more-person households
	Female head
13-18	1-person to 6-or-more-person households
19	*Group quarters persons*
	STAGE II
20	*Head of household*
21	*Not head of household (including persons in group quarters)*
	STAGE III
	Male Negro
22	Age under 5 years
23	5-13
24	14-24
25	25-44
26	45-64
27	65 and older
	Male, not Negro
28-33	Same age groups as for Male Negro
	Female Negro
34-39	Same age groups as for Male Negro
	Female, not Negro
40-45	Same age groups as for Male Negro

At each stage, for each of the groups, the ratio of the complete count to the weighted sample count of the population in the group was computed and applied to the weight of each sample person in the group. This operation was performed for each of the 19 groups in the first stage, then for the two groups in the second stage and finally for the 24 groups in the third stage. As a rule, the weighted sample counts within each of the 24 groups in the third stage should agree with the complete counts for the weighting areas. Close, although not exact, consistency can be expected for the two groups in the second stage and the 19 groups in the first stage.

There are some exceptions to this general rule, however. As indicated above, there may be differences between the complete counts and sample estimates when the tabulation area is not made up of whole weighting areas. Furthermore, in order to increase the reliability, a separate ratio was not computed in a group whenever certain criteria pertaining to the complete count of persons and the magnitude of the weight were not met. For example, for the 20-percent sample the complete count of persons in a group had to exceed 85 persons and the ratio of the complete count to the unweighted sample count could not exceed 20. Where these criteria were not met, groups were combined in a specific order until the conditions were met. Where this occurred, consistency between the weighted sample and the complete counts would apply as indicated above for the combined group but not necessarily for each of the groups in the combination.

Each sample person was assigned an integral weight to avoid the complications involved in rounding in the final tables. If, for example, the final weight for a 20-percent group was 5.2, one-fifth of the persons in the group (selected at random) were assigned a weight of 6 and the remaining four-fifths a weight of 5.

The estimates realize some of the gains in sampling efficiency that would have resulted had the population been stratified into the groups before sampling. The net effect is a reduction in both the sampling error and possible bias of most statistics below what would be obtained by weighting the results of the sample by a uniform factor (e.g., by weighting the 20-percent sample results by a uniform factor of 5). The reduction in sampling error will be trivial for some items and substantial for others. A byproduct of this estimation procedure is that estimates for this sample are, in general, consistent with the complete count for the population groups used in the estimation procedure. A more com-

plete discussion of the technical aspects of these ratio estimates will be presented in a separate report.

SAMPLING VARIABILITY

The estimates from the 20-, 15-, and 5-percent sample tabulations are subject to sampling variability. The standard errors of these estimates can be approximated by using the data in tables A through C. The chances are about 2 out of 3 that the difference (due to sampling variability) between the sample estimate and the figure that would have been obtained from a complete count of the population is less than the standard error. The chances are about 19 out of 20 that the difference is less than twice the standard error and about 99 out of 100 that it is less than 2½ times the standard error. The amount by which the estimated standard error must be multiplied to obtain other odds deemed more appropriate can be found in most statistical textbooks. The sampling errors may be obtained by using the factors shown in table C in conjunction with table A for absolute numbers and in conjunction with table B for percentages. These tables reflect the effect of simple response variance, but not of bias arising in the collection, processing, and estimation steps nor of the correlated errors enumerators introduce; estimates of the magnitude of some of these factors in the total error are being evaluated and will be published at a later date.

Table A shows approximate standard errors of estimated numbers for most statistics based on the 20-percent sample. In determining the figures for this table, some aspects of the sample design, the estimation process, and the population of the area over which the data have been compiled are ignored. Table B shows standard errors of most percentages based on the 20-percent sample. Linear interpolation in tables A and B will provide approximate results that are satisfactory for most purposes. Table C provides a factor by which the standard errors shown in tables A or B should be multiplied to adjust for the combined effect of the sample size (i.e., whether a 20-percent, 15-percent, or 5-percent sample), the sample design, and the estimation procedure.

To estimate the standard error for a given characteristic based on the 15- or 5-percent sample, or for a more precise estimate for the 20-percent sample, locate in table C the factor applying to the characteristic and sample size used to tabulate the data and multiply this factor by the standard error found in table A or B. If the estimate is not identified in table C, use the factor shown for "all other." Where data are shown as cross-classifications of two characteristics, locate and use the larger factor. Similarly, if an item, although collected on one sample basis, has been tabulated for a smaller sample, use the factor appropriate for the smaller sample.

The standard errors estimated from these tables are not directly applicable to differences between two sample estimates. In order to estimate the standard error of a difference, the tables are to be used somewhat differently in the three following situations:

1. For a difference between the sample figure and one based on a complete count (e.g., arising from comparisons between 1970 sample statistics and complete-count statistics for 1960 or 1950), the standard error is identical with the standard error of the 1970 estimate alone.

2. For a difference between two sample figures (that is, one from 1970 and the other from 1960, or both from the same census year), the standard error is approximately the square root of the sum of the squares of the standard errors of each estimate considered separately. This formula will represent the actual standard error quite accurately for the difference between estimates of the same characteristics in two different areas, or for the difference between separate and uncorrelated characteristics in the same area. If, however, there is a high positive correlation between the two characteristics, the formula will overestimate the true standard error. The approximate standard error for the 1970 sample figure is derived directly from tables A through C. The standard error of a 25-percent 1960 sample figure may be obtained from the relevant 1960 census report or an approximate value may be obtained by multiplying the appropriate value in table A or B by 0.9.

3. For a difference between two sample estimates, one of which represents a subclass of the other, the tables can be used directly with the difference considered as the sample estimate.

The sampling variability of the medians presented in certain tables (median age, median years of school completed, and median income) depends on the size of the base and on the distribution on which the median is based. An approximate method for measuring the reliability of an estimated median is to determine an interval about the estimated median

such that there is a stated degree of confidence the true median lies within the interval. As the first step in estimating the upper and lower limits of the interval (that is, the confidence limits) about the median, compute one-half the number on which the median is based (designated $\frac{N}{2}$). From table A, following the method outlined in other parts of this section, compute the standard error of an estimated number equal to $\frac{N}{2}$. Subtract this standard error from $\frac{N}{2}$. Cumulate the frequencies (in the table on which the median is based) until the total first exceeds the difference between $\frac{N}{2}$ and its standard error and by linear interpolation obtain a value corresponding to this number. In a corresponding manner, add the standard error to $\frac{N}{2}$, cumulate the frequencies in the table, and obtain a value in the table on which the median is based corresponding to the sum of $\frac{N}{2}$ and its standard error. The chances are about 2 out of 3 that the median would lie between these two values. The range for 19 chances out of 20 and for 99 in 100 can be computed in a similar manner by multiplying the standard error by the appropriate factors before subtracting from and adding to one-half the number reporting the characteristic. Interpolation to obtain the values corresponding to these numbers gives the confidence limits for the median.

The sampling variability of a mean, such as the number of children ever born per 1,000 women or mean income, presented in certain reports, depends on the variability of the distribution on which the mean is based, the size of the sample, the sample design (for example, the use of households as the sampling unit), and the use of ratio estimates.

An approximation to the variability of the mean may be obtained as follows: compute the standard deviation of the distribution on which the mean is based; divide this figure by the square root of one-fifth of the total units in the distribution; multiply this quotient by the factor from table C appropriate to the statistic and the actual sample rate on which the mean is based. If the distribution is not published in the detailed tables, calculate the standard deviation from a comparable distribution for a larger area or for a similar population group; divide by the square root of one-fifth of the units on which the mean of interest is based; multiply the quotient by the factor from table C.

TABLE A. **Approximate Standard Error of Estimated Number Based on 20-Percent Sample**

(Range of 2 chances out of 3; for factors to be applied see table C and text)

Estimated number[1]	Number of persons, families, or households in area[2]								
	1,000	10,000	25,000	100,000	250,000	1,000,000	3,000,000	5,000,000	20,000,000
50	15	15	15	15	15	15	15	15	15
100	20	20	20	20	20	20	20	20	20
250	30	30	30	30	30	30	30	30	30
500	30	45	45	45	45	45	45	45	45
1,000	...	60	60	65	65	65	65	65	65
2,500	...	90	95	100	100	100	100	100	100
5,000	...	100	130	140	140	140	140	140	140
10,000	...	...	150	190	200	200	200	200	200
15,000	...	...	150	230	240	240	240	240	240
25,000	...	...	...	270	300	310	310	320	320
50,000	...	...	...	320	400	440	440	440	450
75,000	...	...	...	270	450	520	540	540	540
100,000	...	...	...	...	490	600	620	630	630

[1] For estimated numbers larger than 100,000, the relative errors are somewhat smaller than for 100,000.

[2] An area is the smallest complete geographic unit to which the estimate under consideration pertains. Thus, the area may be the State, city, county, standard metropolitan statistical area, urbanized area, or the urban or rural portion of the State or county. The rural farm or rural nonfarm population in the State or county, the Negro population, etc., do not represent complete areas. Total persons, families, or households for an area, if not available in this report, may be found in Volume I, **Characteristics of the Population**.

TABLE B. **Approximate Standard Error of Estimated Percentage Based on 20-Percent Sample**

(Range of 2 chances out of 3; for factors to be applied see table C and text)

Estimated percentage	Base of percentage						
	500	1,000	2,500	10,000	25,000	100,000	250,000
2 or 98	1.3	0.9	0.6	0.3	0.2	0.1	0.1
5 or 95	2.0	1.4	0.9	0.4	0.3	0.1	0.1
10 or 90	2.7	1.9	1.2	0.6	0.4	0.2	0.1
25 or 75	3.9	2.7	1.7	0.9	0.5	0.3	0.2
50	4.5	3.2	2.0	1.0	0.6	0.3	0.2

TABLE C. **Factor to be Applied to Standard Error**

(For cross-classifications of two or more items, use the factor for the item having the largest factor for the given sample rate)

Subject	Factor if sample rate is—		Subject	Factor if sample rate is—	
	20 percent	15 percent		20 percent	15 percent
POPULATION SUBJECTS					
Race	1.4	1.7	Place of work	...	1.7
Age	1.4	1.7	Means of transportation to work	...	1.7
Household relationship	1.0	1.2	Occupation	1.4	1.7
Families and subfamilies[1]	1.0	1.2	Industry	1.4	1.7
Unrelated individuals	1.4	1.7	Class of worker	1.4	1.7
Type of group quarters	1.4	1.7	Income in 1969		
Marital status	1.4	1.7	Persons	1.4	1.7
Marital history	...	...	Families[1]	1.0	1.2
State of birth	1.4	1.7	Poverty status in 1969		
Country of origin			Persons	1.8	2.2
Foreign born	...	1.7	Families[1]	1.4	1.2
Foreign stock	...	1.7			
American Indians	1.4	1.7	Other population subjects	1.4	1.7
Nativity and parentage	...	1.7	HOUSING SUBJECTS[1]		
Mother tongue	...	1.8	Tenure	1.0	1.2
Citizenship	...	...	Vacancy status	1.0	1.2
Year of immigration	...	...	Rooms	1.0	1.2
Year moved into present house	...	1.9	Size of household (persons)	1.0	1.2
Residence in 1965	...	2.0	Persons per room	1.0	1.2
Rural farm and nonfarm residence	1.7	2.0	Units in structure	1.0	1.2
School enrollment	...	1.7	Year structure built	1.0	1.2
Years of school completed	1.4	1.7	Year moved into unit	...	1.2
Vocational training	...	...	Heating equipment	1.0	1.2
Veteran status	...	1.7	Plumbing facilities	1.0	1.2
Disability	...	...	Air conditioning	...	1.2
Labor force status or participation	1.4	1.7	Appliances	...	...
Unemployed	1.4	1.7	Automobiles available	...	1.2
Hours worked	1.4	1.7	Telephone available	1.0	1.2
Weeks worked in 1969	1.4	1.7	Value	1.0	1.2
Year last worked	1.4	1.7	Contract rent	1.0	1.2
Activity 5 years ago	1.4	1.7	Gross rent	1.0	1.2
			Other housing subjects	1.0	1.2

[1] When determining the standard error of a number that relates to families or households rather than to persons, use the number of families or households in the area rather than the population of the area for selecting the appropriate column in table A.

NOTE: See the section on "Comparability With Other Data" in the introduction for a method of adjusting the data. The factors in the above table are appropriate when this adjustment has been made.

Appendix E.—PUBLICATION AND COMPUTER SUMMARY TAPE PROGRAM

The results of the 1970 Census of Population and Housing are being issued in the form of printed reports, microfiche copies of the printed reports, computer summary tapes, computer printouts, and microfilm. Listed below are short descriptions of the final report series and computer tapes, as currently planned. More detailed information on this program can be obtained by writing to the Publications Distribution Section, Bureau of the Census, Washington, D.C. 20233.

Population Census Reports

Volume I.
CHARACTERISTICS OF THE POPULATION

This volume consists of 58 "parts"—number 1 for the United States, numbers 2 through 52 for the 50 States and the District of Columbia in alphabetical order, and numbers 53 through 58 for Puerto Rico, Guam, Virgin Islands, American Samoa, Canal Zone, and Trust Territory of the Pacific Islands, respectively. Each part, which is a separate clothbound book, contains four chapters designated as A, B, C, and D. Each chapter (for each of the 58 areas) is issued as an individual paperbound report in four series designated as PC(1)-A, B, C, and D, respectively. The 58 PC(1)-A reports have been specially assembled and issued in a clothbound book, designated as Part A.

- Series PC(1)-A.
  NUMBER OF INHABITANTS

Final official population counts are presented for States, counties by urban and rural residence, standard metropolitan statistical areas (SMSA's), urbanized areas, county subdivisions, all incorporated places, and unincorporated places of 1,000 inhabitants or more.

- Series PC(1)-B.
  GENERAL POPULATION CHARACTERISTICS

Statistics on age, sex, race, marital status, and relationship to head of household are presented for States, counties by urban and rural residence, SMSA's, urbanized areas, county subdivisions, and places of 1,000 inhabitants or more.

- Series PC(1)-C.
  GENERAL SOCIAL AND ECONOMIC CHARACTERISTICS

Statistics are presented on nativity and parentage, State or country of birth, Spanish origin, mother tongue, residence 5 years ago, year moved into present house, school enrollment (public or private), years of school completed, vocational training, number of children ever born, family composition, disability, veteran status, employment status, place of work, means of transportation to work, occupation group, industry group, class of worker, and income (by type) in 1969 of families and individuals. Each subject is shown for some or all of the following areas: States, counties (by urban, rural-nonfarm, and rural-farm residence), SMSA's, urbanized areas, and places of 2,500 inhabitants or more.

- Series PC(1)-D.
  DETAILED CHARACTERISTICS

These reports cover most of the subjects shown in Series PC(1)-C, above, presenting the data in considerable detail and cross-classified by age, race, and other characteristics. Each subject is shown for some or all of the following areas: States (by urban, rural-nonfarm, and rural-farm residence), SMSA's, and large cities.

Volume II.
SUBJECT REPORTS

Each report in this volume, also designated as Series PC(2), concentrates on a particular subject. Detailed information and cross-relationships are generally provided on a national and regional level; in some reports, data for States or SMSA's also are shown. Among the characteristics covered are national origin and race, fertility, families, marital status, migration, education, unemployment, occupation, industry, and income.

Housing Census Reports

Volume I.
HOUSING CHARACTERISTICS FOR STATES, CITIES, AND COUNTIES

This volume consists of 58 "parts"—number 1 for the United States, numbers 2 through 52 for the 50 States and the District of Columbia in alphabetical order, and numbers 53 through 58 for Puerto Rico, Guam, Virgin Islands, American Samoa, Canal Zone, and Trust Territory of the Pacific Islands, respectively. Each part, which is a separate clothbound book, contains two chapters designated as A and B. Each chapter (for each of the 58 areas) is issued as an individual paperbound report in two series designated as HC(1)-A and B, respectively.

- Series HC(1)-A.
  GENERAL HOUSING CHARACTERISTICS

Statistics on tenure, kitchen facilities, plumbing facilities, number of rooms, persons per room, units in structure, mobile home, telephone, value, contract rent, and vacancy status are presented for some or all of the following areas: States (by urban and rural residence), SMSA's, urbanized areas, places of 1,000 inhabitants or more, and counties.

- Series HC(1)-B.
  DETAILED HOUSING CHARACTERISTICS

Statistics are presented on a more detailed basis for the subjects included in the Series HC(1)-A reports, as well as on such additional subjects as year moved into unit, year structure built, basement, heating equipment, fuels, air conditioning, water and sewage, appliances, gross rent, and ownership of second home. Each subject is shown for some or all of the following areas: States (by urban, rural-nonfarm, and rural-farm residence), SMSA's, urbanized areas, places of 2,500 inhabitants or more, and counties (by rural and rural-farm residence).

Volume II.
METROPOLITAN HOUSING CHARACTERISTICS

These reports, also designated as Series HC(2), cover most of the 1970 census housing subjects in considerable detail and cross-classification. There is one report for each SMSA, presenting data for the SMSA and its central cities and places of 50,000 inhabitants or more, as well as a national summary report.

Volume III.
BLOCK STATISTICS

One report, under the designation Series HC(3), is issued for each urbanized area showing data for individual blocks on selected housing and population subjects. The series also includes reports for the communities outside urbanized areas which have contracted with the Census Bureau to provide block statistics from the 1970 census.

Volume IV.
COMPONENTS OF INVENTORY CHANGE

This volume contains data on the disposition of the 1960 inventory and the source of the 1970 inventory, such as new construction, conversions, mergers, demolitions, and other additions and losses. Cross-tabulations of 1970 and 1960 characteristics for units that have not changed and characteristics of the present and previous residence of recent movers are also provided. Statistics are shown for 15 selected SMSA's and for the United States and regions.

Volume V.
RESIDENTIAL FINANCE

This volume presents data regarding the financing of privately owned nonfarm residential properties. Statistics are shown on amount of outstanding mortgage debt, manner of acquisition of property, homeowner expenses, and other owner, property, and mortgage characteristics for the United States and regions.

Volume VI.
PLUMBING FACILITIES AND ESTIMATES OF DILAPIDATED HOUSING
This volume will present counts of housing units lacking some or all plumbing facilities and estimates of "dilapidated" units with all plumbing facilities. Comparative 1960 and 1970 data will be shown for the United States and regions, States, SMSA's, counties, and places of 10,000 inhabitants or more.

Volume VII.
SUBJECT REPORTS
Each report in this volume concentrates on a particular subject. Detailed information and cross-classifications are generally provided on a national and regional level; in some reports, data for States or SMSA's are also shown. Among the subjects covered are housing characteristics by household composition, housing of minority groups and senior citizens, and households in mobile homes.

Joint Population-Housing Reports

Series PHC(1).
CENSUS TRACTS
This series contains one report for each SMSA that is tracted, showing data for most of the population and housing subjects included in the 1970 census.

Series PHC(2).
GENERAL DEMOGRAPHIC TRENDS FOR METROPOLITAN AREAS, 1960 TO 1970
This series consists of one report for each State and the District of Columbia, as well as a national summary report, presenting statistics for the State and for SMSA's and their central cities and constituent counties. Comparative 1960 and 1970 data are shown on population counts by age and race and on such housing subjects as tenure, plumbing facilities, value, and contract rent.

Series PHC(3).
EMPLOYMENT PROFILES OF SELECTED LOW-INCOME AREAS
This series consists of 76 reports, each presenting statistics on the social and economic characteristics of the residents of a particular low-income area. The data relate to low-income neighborhoods in 51 cities and seven rural poverty areas. Each report provides statistics on employment and unemployment, education, vocational training, availability for work, job history, and income, as well as on value or rent and number of rooms in the housing unit.

Additional Reports

Series PHC(E).
EVALUATION REPORTS
This open series presents the results of the extensive evaluation program conducted as an integral part of the 1970 census program, and relating to such matters as completeness of enumeration and quality of the data on characteristics.

Series PHC(R).
PROCEDURAL REPORTS
This open series presents information on various administrative and methodological aspects of the 1970 census and will include a comprehensive procedural history of the 1970 census.

Computer Summary Tapes

The major portion of the results of the 1970 census are produced in a set of six tabulation counts. To help meet the needs of census users, these counts are designed to provide data with much greater subject and geographic detail than it is feasible or desirable to publish in printed reports. The data so tabulated are generally available—subject to suppression of certain detail where necessary to protect confidentiality—on magnetic computer tape, printouts, and microfilm, at the cost of preparing the copy.

First Count—source of the PC(1)-A reports; contains about 400 cells of data on the subjects covered in the PC(1)-B and HC(1)-A reports and tabulated for each of the approximately 250,000 enumeration districts and all areas in the PC(1)-A reports for the United States.

Second Count—source of the PC(1)-B, HC(1)-A, and part of the PHC(1) reports; contains about 3,500 cells of data covering the subjects in these reports and tabulated for the approximately 35,000 tracts, 3,000 counties, 35,000 county subdivisions, and 10,000 places of 1,000 or more in the United States.

Third Count—source of the HC(3) reports; contains about 250 cells of data on the subjects covered in the PC(1)-B and HC(1)-A reports and tabulated for approximately 1,500,000 blocks in the United States.

Fourth Count—source of the PC(1)-C, HC(1)-B, and part of the PHC(1) reports; contains about 13,000 cells of data covering the subjects in these reports and tabulated for the approximately 35,000 tracts and 35,000 county subdivisions, and about 6,000 places of 2,500 or more in the United States; also contains about 30,000 cells of data for each county.

Fifth Count—contains approximately 800 cells of population and housing data for 5-digit ZIP code areas in SMSA's and 3-digit ZIP code areas outside SMSA's; the ZIP code data are available only on tape.

Sixth Count—source of the PC(1)-D and HC(2) reports; contains about 260,000 cells of data covering the subjects in these reports and tabulated for States, SMSA's, and large cities.

The tapes are generally organized on a State basis. To use the First Count and Third Count tapes, it is necessary to purchase the appropriate enumeration district and block maps.

The term "cells" used herein to indicate the scope of subject content of the several counts refers to each figure or statistic in the tabulation for a specific geographic area. For example, in the Third Count, there are six cells for a cross-classification of race by sex: three categories of race (white, Negro, other race) by two categories of sex (male, female).

In addition to the above-mentioned summary tapes, the Census Bureau makes available for purchase certain sample tape files containing population and housing characteristics as shown on individual census records. These files contain no names or addresses, and the geographic identification is sufficiently broad to protect confidentiality. There are six files, each containing a 1-percent national sample of persons and housing units. Three of the files are drawn from the population covered by the census 15-percent sample and three from the population in the census 5-percent sample. Each of these three files provides a different type of geographic information: One identifies individual large SMSA's and, for the rest of the country, groups of counties; the second identifies individual States and, where they are sufficiently large, provides urban-rural and metropolitan-nonmetropolitan detail; and the third identifies State groups and size of place, with each individual record showing selected characteristics of the person's neighborhood.
